Type: Circle

A slight bay window here with windows on the angled sides also. This will give the illusion of space and the ability to see more to the side than straight out.

Type: Circle

A triple window in the media room. We spend most of our time in the evenings watching TV. Currently there are no windows so we do not see the sun go down and miss most of the day. This will be our TV room and do not want to let time slip by because it is so dark in the room. Having some nice windows here and then have a system to black them out. Maybe something similar to the doors in the bedroom.

Type: Circle

No windows on this wall. The furniture here will be 11+ feet long and approx. 43" tall. May have a half wall here to have it fit.

Type: Circle

Would like to have plenty of wall space for desks. So the bottoms of the windows need to be a little taller. On this wall, change the double doors to a door and a window.

Type: Circle

We will have a central vacuum. This may go here or in the basement. It may be best in the garage so that it will not be making noise in the house when the basement is finished. Also like to have a utility sink in the garage.

Type: Circle

Garage and doors to be insulated type. Keeps things a bit warmer in winter time. Also make sure they are wide (9 ft?)

Type: Circle

Fireplace on this floor will be gas. Even if it is just a direct vent unit. Do not want something that will "suck" out all the heat in the room like a normal fireplace chimney. A direct vent fireplace and vented out the back wall is fine here. Raised hearth and stone look to make it look like this is a real burning fireplace, but is really just for looks. Full masonry flue will go from basement out the top and will be a "secondard" heat source. Probably a free standing wood stove.

Type: Circle

Not sure if these steps are needed. Will depend on the level of main floor (and basement) and garage.

Type: Circle

Refrigerator should be next to the media room (to get a quick drink) and microwave/oven unit will be built in where the refrigerator is now. Sinks needs to move away from corner a bit. Trash compactor to the right of the cooktop in the island. Where cooktop is, will be extra wide but at the same level. Where blue line is, the counter will raise to bar height level. On the vertical (where blue line is) will be the island outlet and possible dimmer for lighting above. Under the counter will look solid with metal foot rests (like at a bar). Counter tops may be concrete so flooring should take that into account. Dishwasher to the right of the sink. A section of open shelves to left and right of the sink for everyday dishes (plates bowls, glasses) Window may only be a single to allow for over head cabinets

Type: Circle

MBR closet to also have raised ceiling. Want this to be different than any other closet! Upper shelves will be full of shoes!. Could be between trusses or may also need a different truss design.

Rotate tub so it sticks out in the middle of the room. That space is wasted as it is and has the layout of every other bathroom. Tub will be rounded so as not to take up as much space as one with a square deck. Room will also have an ocean/aqua/water/open/fresh color scheme (see Janet Jackson video). Window should be in the toilet area instead of the shower area.

Type: Circle

No need for walls between master bedroom, master bath and master closet. Sliding doors will be able to move from one side to the other to open things up when needed, but also close entire room off when one person is sleeping and other needs to get up early. Need to have a small floor to ceiling closet in bathroom.

Wall material can be something other than normal to get a better curve. Plywood then a cool covering (metal?) would be good.
Will probably be a wall with LOTS of pictures. A wild background that fits the open/rustic/modern mood of the balcony would be good.
